

## ▼ 1. Inputs

Specify if this endpoint accepts any inputs or query parameters

text  
**countries**

text  
**sort**

integer  
**limit**

text  
**categories**

## ▼ 2. Function Stack

Add functions below to determine how your endpoint gets processed

Hold **Shift** + drag or select

 Group

 Disable

Expand all

Search ...

 Delete

Collapse all

1

**API Request To**

http://api.mediastack.com/v1/news?sort=...

return as **response**

2

**Create Variable**

var: **data**

=

var: response.response.result.data

return as **data**

## ▼ 3. Response

Optionally have this API endpoint return a value from above to the front-end

RETURN

AS...

var: **data**

var: **data**

## Run & Debug

### Query Trace

Get detailed information about the execution of your query

☒ INCLUDE VARIABLE DETAILS DURING RUN

The values below will persist for your browser's session. Once you close your browser, they will be cleared.

```
1  {  
2    "countries": "us",  
3    "sort": "published_desc",  
4    "limit": 0,  
5    "categories": ""  
6  }
```

## Run & Debug

Return As: response

```

{
  > request: {url, method, headers, params},
  > response: {
    > headers: [22],
    > result: {
      > pagination: {
        limit: 25,
        offset: 0,
        count: 25,
        total: 10000
      },
      > data: [
